SUMMARY

Software and DevOps engineer focused on CI/CD pipelines, build systems, and cloud infrastructure automation. Hands-on with continuous integration, automated integration workflows, container packaging, Kubernetes orchestration, and Linux/Unix scripting. Computer Science foundation in networking fundamentals, distributed systems, troubleshooting, and root-cause analysis.

EDUCATION

Seneca Polytechnic Sept. 2024 - Apr. 2026
Postgraduate Certificates in Cloud Architecture & Cybersecurity 4.0 GPA
Computer Science coursework: operating systems, networking fundamentals (TCP/IP, DNS), distributed systems, scripting, SDLC.

EXPERIENCE

Information Technology Analyst, DevOps & Infrastructure (Co-op) Jan. 2026 - Apr. 2026
Ministry of Health (MPBSDP) | Government of Ontario North York, ON

- Automated Linux/Unix (Ubuntu) OS provisioning across **21 sites** using a parallel-safe Ansible playbook with per-VM OVA templates and cloud-init, cutting provisioning time by **80%** across **100+ VMs**. Code reviewed via Azure DevOps Repos pull request workflow.
- Engineered **PowerShell** automation for a **150-machine** Citrix VDA upgrade - debugging environment failures and reducing a manual workflow from **~187 hours** to **~12 hours**.
- Architected modernization of the application lifecycle tracker - pivoted from Visio/Excel to SharePoint, built **5 Power BI** dashboards from scratch, and automated bi-weekly stakeholder alerting via Power Automate (**100%** automated, **2-week** cadence).
- Coordinated **100+** infrastructure CRQs through CAB approval, implementation, and closure - driving change management in eSMT portal.

PROJECTS

CI/CD Platform & Cloud-Native Microservices Deployment on AWS | [Infra GitHub](#) | [WebApp GitHub](#) | [Medium](#)

- Built a **GitHub Actions** continuous integration / automated integration pipeline with OIDC federated authentication and environment detection - packaging container images and auto-pushing to ECR for dev and prod, supporting reproducible builds at scale.
- Provisioned multi-environment AWS cloud infrastructure with modular Terraform (VPC, EKS, ECR, Secrets Manager), S3 remote state and locking - applying Infrastructure as Code and cloud computing practices.
- Deployed distributed microservices on EKS (Kubernetes) with IRSA secrets, ALB Ingress, and HPA auto-scaling - designing and troubleshooting a distributed system across two availability zones.
- Designed layered VPC networking with public/private subnets, NAT egress, and security group chaining - applying TCP/IP, DNS, and load balancing fundamentals.

Production-Ready 3-Tier AWS Build Pipeline with Terraform & CI/CD | [GitHub](#) | [Medium Pt.1](#) | [Medium Pt.2](#)

- Built modular Terraform 3-tier architecture (ALB, ASG, RDS MySQL) with S3 remote state, DynamoDB locking, and security group chaining - version-controlled in Git.
- Integrated GitHub Actions CI/CD with OIDC authentication and a manual approval gate, running fmt/validate/plan on PRs and gated apply on merge - a software engineering workflow for infrastructure changes.
- Secured workloads with Secrets Manager runtime credential injection, IMDSv2 enforcement, scoped IAM profiles, and Bastion SSH access - debugging auth and network failures.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EKS, ECR, VPC, IAM, Secrets Manager, RDS, ALB, S3, CloudWatch), Terraform, Ansible
CI/CD: GitHub Actions, OIDC, multi-environment pipelines, automated builds & deployments
Containers & Orchestration: Docker, Kubernetes
Operating Systems: Linux/Unix (Amazon Linux, Ubuntu), Windows Server
Scripting: Bash, PowerShell
Networking: TCP/IP, HTTP, DNS, VPC, subnets, NAT, load balancing
Version Control Systems: Git, GitHub, Azure DevOps (Repos & Boards), pull request workflows
Security: IAM, Secrets Management, encryption, IMDSv2, least-privilege design
Operations: Incident response, root-cause analysis, change management (eSMT, CAB)

CERTIFICATIONS & AWARDS

[AWS Solutions Architect – Associate \(SAA-C03\), 2026](#) • [AWS JAM Winner](#) • 4× President's Honour List
